

STEPHEN SCHULTZ

Phone: (801) 422-1693

FAX: (801) 422-0201

email: schultz@ee.byu.edu

EDUCATION

1999 Georgia Institute of Technology Atlanta, GA

Ph.D. Electrical Engineering

- Dissertation Title: High Efficiency Volume Grating Coupler

1994 Brigham Young University Provo, UT

M.S. Electrical Engineering

- Thesis title: Resonant Tunneling Analysis of Slab Waveguides

1992 Brigham Young University Provo, UT

B.S. in Electrical Engineering

COURSE TAUGHT

New Student Seminar (ECEn191)

Circuits (ECEn240)

Electronic Circuit Design 1 (ECEn340)

Fields and Waves (ECEn360)

Transmission Lines for High-Speed Digital Systems (ECEn 362)

Junior Design Project (ECEn 390)

Electromagnetic Radiation and Propagation (ECEn 462)

Optical Engineering (ECEn 466)

Senior Design Project (ECEn490)

Optical Communication Components and Systems (ECEn 562)

Advanced Optical Engineering (ECEn 661)

PROFESSIONAL EXPERIENCE

Professor (2014-Present)

Department of Electrical Engineering, Brigham Young University, Provo, UT

- Supervise and guide undergraduate and graduate research projects
- Manage optical fiber research program

Associate Professor (2008-Present)

Department of Electrical Engineering, Brigham Young University, Provo, UT

- Supervise and guide undergraduate and graduate research projects
- Manage optical fiber research program

Assistant Professor (2002-2008)

Department of Electrical Engineering, Brigham Young University, Provo, UT

- Teach undergraduate and graduate students
- Supervise and guide master's and doctorate students' thesis work

- Supervise and guide undergraduate research and senior level projects
- Establish and direct Optical Fiber Device research program

Consultant (2003-2004)

L-3 Communications, Communications Systems West, Salt Lake City, UT

- Analyzed the advantages and disadvantages of free space laser communications for air-to-air, air-to-satellite, and air-to-ground.
- Analyzed atmospheric propagation of lasers.

Senior Staff Engineer (1999-2002)

Raytheon Missile Systems, Tucson, AZ

- Performed optical design and stray light analysis on various passive infrared imaging missile seekers and active laser radar systems.
- Supplied support for the testing of the optical performance of existing missile seekers
- Contributed to various internal research and development programs including: hyper-spectral imaging, photonic bandgap structures applied to radar missiles, and other classified work.

Graduate Research Assistant (1994-1999)

Department of Electrical Engineering, Georgia Institute of Technology, Atlanta, GA

- Developed computer simulation code for analysis of gratings
- Built and tested sub-micron period surface-relief and volume gratings.
- Designed, built, and tested a guided wave optical interconnect

Graduate Internship (Apr. 1997-June 1997)

Motorola's Phoenix Applied Research Center, Tempe, AZ

- Investigated the application of diffractive optics onto vertical cavity surface emitting lasers for use in the commercial parallel optical interconnect system OPTOBUS™.

PROFESSIONAL ACTIVITIES

Research Funding

Project Name	Period	Funding Source	Role	Total Grant
Optical fiber sensors for nonintrusive voltage measurements in HPM targets	2013-2016	Office of the Secretary of Defense	PI	\$719k
Electric Field Sensors for Railgun Applications	2010-2011	Office of the Secretary of Defense	PI	\$141k
Advanced Magnetic Field Sensing	2009-2011	Office of the Secretary of Defense	PI	\$231k
Electric Field Sensor System	2009	Office of Naval Research (ONR)	PI	\$35k

Project Name	Period	Funding Source	Role	Total Grant
Full spectral interrogation of fiber Bragg grating sensors for damage identification	2009-2012	National Science Foundation (NSF)	PI	\$148k
Advanced Polymer Optical Sensors (APOS)	2008-2011	Office of the Secretary of Defense	PI	\$360k
MRI: Acquisition of chlorine based reactive ion etcher	2007	National Science Foundation (NSF)	Co-PI	\$300k
D-fiber sensors in harsh environments	2007-2009	Office of the Secretary of Defense	PI	\$356k
D-fiber surface relief gratings	2006-2007	Harris Corporation	PI	\$35k
Impedance measurement of micro-fluidic channels	2006	BYU	Co-PI	\$15k
Impedance Measurement of Micro-Fluidic Channels	2006 - 2007	BYU	Co-PI	\$12k
Compact integrated monitoring system for fiber sensors	2004-2005	Office of the Secretary of Defense	PI	\$164
MEMS display elements based on optical interference	2004-2005	BYU	PI	\$5k
An optical fiber high-speed survivable transducer for high power microwaves	2004-2007	Office of the Secretary of Defense	PI	\$297k
Nanoscopic Imaging Based on Optical Tomography	2003	BYU	Co-PI	\$10k
D-fiber for multidimensional sensor applications	2003-2004	Office of the Secretary of Defense	PI	\$116k
IMMERSE – Intensive Mentoring and Research in Micro-Electronics for Students in Engineering	2003 - 2013	BYU	PI	\$220k
D-fiber Tunable Filters	2002-2003	BYU	PI	\$14k
Phase Mask Recording of Diffractive Components	2002-2003	BYU	PI	\$11k

Project Name	Period	Funding Source	Role	Total Grant
				\$3.03 M

Undergraduate Research Program

Together with Prof. Aaron Hawkins of BYU's Electrical and Computer Engineering Department, I initiated the Intensive Mentoring and Micro-Electronic Research for Students in Engineering (IMMERSE) program in 2003. Its goal is to prepare students for entry into top tier graduate programs and provide them an opportunity to author or co-author a technical paper. Each year approximately 15 undergraduate students participate in the program that involves one-on-one training by faculty and senior students, imbedding students into existing research projects, and assigning each student an independent project. Students are offered full time employment in the summer and part time employment during the school year. Funding is provided by an existing BYU mentoring program, MICRON Corp., and through external research grants.

IMMERSE Highlights:

- 180 Students employed since 2003
- > 80% of students have authored or co-authored a technical paper
- > 75% of students have pursued graduate degrees

<http://www.immerse.byu.edu>

Web Based Reference Tools

An effort was begun in 2003 to provide on-line instructions for the tools in BYU's cleanroom facility, the Integrated Microfabrication Laboratory. This work rapidly expanded to include basic reference information on semiconductors, microfabrication, and equipment operation, including tutorials and interactive calculators and graphs. This information is now contained at the following website: www.cleanroom.byu.edu and contains over 250 separate pages of information. The site receives over 70,000 hits per month from external visitors who use it as an essential reference. A companion site was launched in 2005 dedicated to providing reference information on photonics topics: www.ee.byu.edu/photonics. This site contains over 100 separate pages and receives 20,000 hits per month from external visitors. Most of the HTML coding is done by students participating in the IMMERSE program.

Outreach Activities

Under the frame work of the IMMERSE program, I coordinated the development of various outreach activities. These include the development of various demonstrations that have been used at Engineering Week, New Student Orientation, and Open Major Fair. We also worked with the Multicultural Center at BYU to introduce under-represented minority students to engineering through hands on activities every summer as part of the Summer Of Academic Refinement (www.immerse.byu.edu/soar.phtml). I have also helped develop a summer engineering camp for junior high school aged students called Chip Camp (chipcamp.ce.byu.edu).

Curriculum Development

- Increased amount of optics taught
 - Developed a graduate course called Advanced Optical Engineering (ECE661)

- Developed a senior level course called Optical Engineering (ECE466)
- Developed a senior design project related to optics called Free Space Optical Communications (ECE490). The development of this project resulted in a journal publication (IEEE Trans. on Education)
- Developed a senior design project called Laser Tag (ECE490)
- Developed a senior level class on power electronics
- Developed an Introduction to Electrical and Computer Engineering course. This development included writing a book, developing Flash based online activities and the transition of the book over to an eBook format.
- Developed a coordinated curriculum for the junior year that is called Junior Core. This new curriculum will be fully implemented in the Fall Semester of 2014. In this curriculum the students will build a laser tag system.

Students Graduated

MS Students: 7

PhD Students: 4
